

SAHARSH DUDHYAL

Pune, India | P: +91 9420781481 | saharshdudhyal@gmail.com | [LinkedIn](#) | [Github](#)

PROFILE

Computer Science undergraduate focused on full-stack development, AI-powered systems, and developer tooling. Experienced in building RAG applications, browser extensions, monitoring frameworks, and cloud-based solutions using React, Node.js, Python, Docker, and AWS.

EDUCATION

AISSMS Institute of Information Technology

Pune

B.Tech in Computer Science and
Engineering
Cumulative GPA: 7.94

SKILLS

Languages: C++, Python, JavaScript, SQL

Frontend: HTML, CSS, React.js, Next.js

Tools: Docker, Git, GitHub, Postman

Backend: Node.js, Express, REST APIs

Cloud & Databases: AWS (EC2, S3), Firebase

PROJECTS

Radium – AI Research Paper Assistant

Jan 26

Developed an AI-powered research assistant enabling semantic search and question answering across multiple research papers using Retrieval-Augmented Generation.

- Implemented a **document ingestion pipeline** with **100+ page documents**, PDF parsing and text chunking
- Integrated **vector-based semantic retrieval** for relevant context extraction
- Implemented hybrid retrieval combining semantic search and contextual ranking for improved response relevance
- Engineered workspace-based conversations with **sub-second document retrieval performance**

Face-Based – Biometric Browser Autofill Extension

April 26 – Present

Built a biometric authentication system allowing users to log into web platforms using facial recognition

- Engineered a secure identity verification workflow before releasing locally stored credentials
- Integrated face enrollment and verification, achieving **sub-3-second authentication workflows**
- Developed browser-side automation for face capture, identity validation, and autofill across **multiple authentication pages**

Log-Pilot – Agentic Observability & Self-Healing Platform

May 26 – Present

Node.js, Express.js, SQLite, Splunk, WebSockets, AI/LLMs

- Built a observability platform that monitors **100% of HTTP requests** and **collects 5+ system metrics** (CPU, memory, event-loop lag, latency, error rate), reducing manual debugging effort by 70%+.
- Engineered AI-powered incident investigation using Splunk integration, NLP search, and correlation graphs, reducing **root-cause analysis time by up to 60%** in simulated production failures.
- Developed a self-healing engine with **8+ automated recovery** actions including circuit breaking, rate limiting, garbage collection, and custom remediation workflows, **improving recovery speed by up to 70%**.
- Engineered an AI-powered incident investigation pipeline integrating Splunk HEC, NLP search, correlation graphs, and root-cause analysis, enabling analysis of incidents across logs, metrics, deployments, and recovery actions from a single dashboard.

CERTIFICATIONS

AWS Cloud Practitioner – Foundational understanding of cloud concepts, EC2, S3, and basic cloud architecture.

ACHIEVEMENTS

- AWS Cloud Practitioner certified with practical cloud deployment experience.
- Solved 150+ Data Structures and Algorithms problems on LeetCode.
- Built and deployed 4+ projects spanning AI systems, browser extensions, developer tooling, and cloud applications.
- Developed RAG pipelines enabling semantic search and contextual question answering across large document collections.
