

SAHARSH DUDHYAL

Pune, India | P: +91 9420781481 | saharshdudhyal@gmail.com | [LinkedIn](#) | [Github](#)

PROFILE

Computer Science undergraduate focused on full-stack development, AI-powered systems, and developer tooling. Experienced in building RAG applications, browser extensions, monitoring frameworks, and cloud-based solutions using React, Node.js, Python, Docker, and AWS.

EDUCATION

AISSMS Institute of Information Technology

Pune

B.Tech in Computer Science and Engineering

Cumulative GPA: 7.94

SKILLS

Languages: C++, Python, JavaScript, SQL

Frontend: HTML, CSS, React.js, Next.js

Tools: Docker, Git, GitHub, Postman

Backend: Node.js, Express, REST APIs

Cloud & Databases: AWS (EC2, S3), Firebase

PROJECTS

[Car Rental](#) – Vehicle Rental Web Application

Oct 25

Full-stack web application for booking and managing vehicle rentals.

- Built responsive React interfaces across **multiple user workflows**, including vehicle browsing, booking, and administration
- Implemented authentication and **role-based access** for admins and customers
- Integrated **Firebase for database management** of vehicles and bookings
- Designed **10+ APIs** for managing rental operations and user interactions

[Radium](#) – AI Research Paper Assistant

Jan 26

Developed an AI-powered research assistant enabling semantic search and question answering across multiple research papers using Retrieval-Augmented Generation.

- Implemented a **document ingestion pipeline** with **100+ page documents**, PDF parsing and text chunking
- Integrated **vector-based semantic retrieval** for relevant context extraction
- Implemented hybrid retrieval combining semantic search and contextual ranking for improved response relevance
- Engineered workspace-based conversations with **sub-second document retrieval performance**

[Face-Based](#) – Biometric Browser Autofill Extension

April 26 – Present

Built a biometric authentication system allowing users to log into web platforms using facial recognition

- Engineered a secure identity verification workflow before releasing locally stored credentials
- Integrated face enrollment and verification, achieving **sub-3-second authentication workflows**
- Developed browser-side automation for face capture, identity validation, and autofill across **multiple authentication pages**

[Log-Pilot](#) – Intelligent Monitoring Framework

May 26 – Present

Zero-config monitoring, NLP log search, and self-healing for Node.js apps.

- Built a Node.js monitoring framework that automatically tracks **HTTP latency, error rates, status codes, CPU, memory, and event-loop metrics** with zero-configuration setup.
- Built a real-time dashboard with anomaly detection and WebSocket log streaming for live observability.
- Implemented natural-language log search, enabling developers to query logs without complex filtering syntax.
- Engineered a self-healing engine supporting **5+ automated recovery actions**, including circuit breaking, restart, garbage collection, and alert-driven remediation

CERTIFICATIONS

AWS Cloud Practitioner – Foundational understanding of cloud concepts, EC2, S3, and basic cloud architecture.

ACHIEVEMENTS

- AWS Cloud Practitioner certified with practical cloud deployment experience.
- Solved 120+ Data Structures and Algorithms problems on LeetCode.
- Built and deployed 4+ projects spanning AI systems, browser extensions, developer tooling, and cloud applications.
- Developed RAG pipelines enabling semantic search and contextual question answering across large document collections.
